About Us

We are renewable energy specialists.

We have helped individuals, businesses, and communities reduce their carbon footprint, increase energy independence, and enhance financial performance.

We work alongside trusted partners responsible for over 520 MW of renewable energy in the commercial and industrial sector in the UK, Europe, and North America.

The Problem

UK commercial buildings — from farms to industrial estates — face rising energy costs and pressure to cut emissions.

This means:

- Reliance on volatile grid electricity
- Significant upfront CapEx for solutions
- Uncertainty around long-term energy costs

The Opportunity

Access low-cost, clean energy through a fully funded on-site renewable system.

This offers:

- Electricity at 20-40% below-market prices
- Long-term agreement over 15–25 years
- Zero upfront costs fully funded & maintained
- Improved EPC and ESG performance

Renewable PPAs

A Power Purchase Agreement (PPA) is a long-term contract that allows businesses to access clean, renewable energy with no upfront cost.

Through a PPA, we fund, install, and maintain a renewable energy system — such as solar, battery storage, or other technologies — directly on your site. You simply pay for the power generated, typically at a rate significantly lower than the grid.

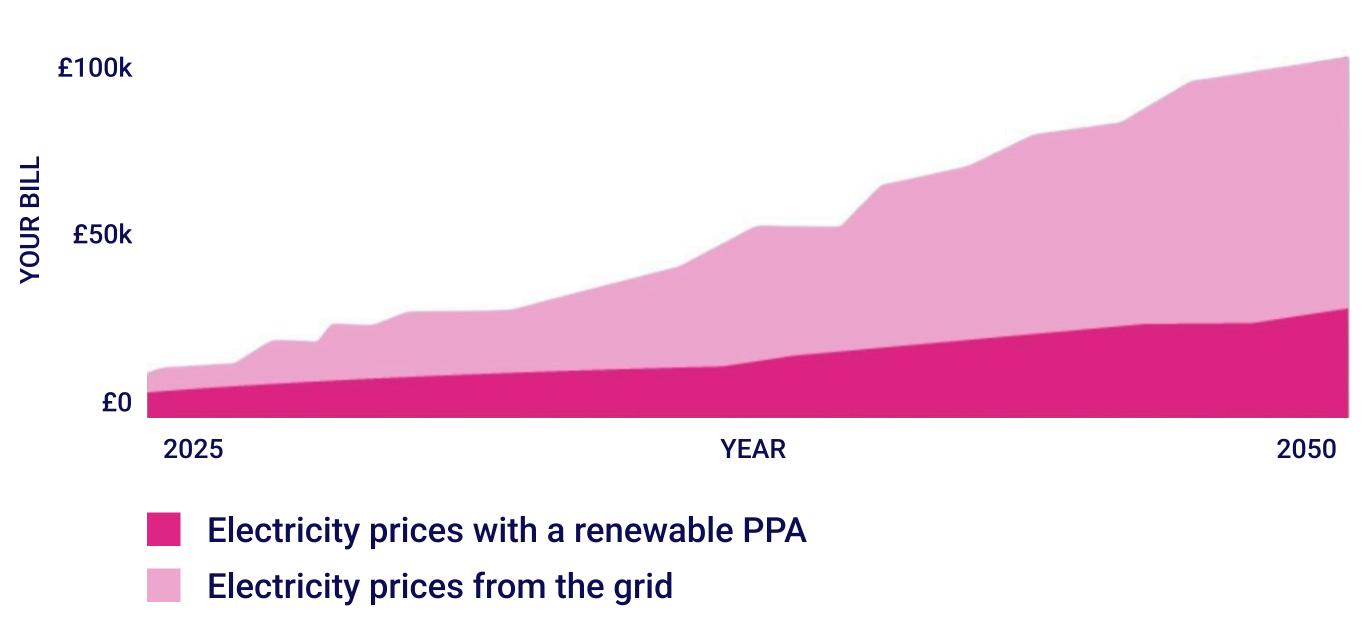

Why This Matters

Electricity prices in the UK are increasingly volatile, making it harder for businesses to plan and control costs.

Rideau offers long-term protection by locking in a fixed rate from a clean, on-site renewable energy system.

This provides price certainty, reduces exposure to market spikes, and delivers a more resilient energy strategy.

PPA Benefits

Fixed Energy Costs

15-25 Years

Immediate Savings

No Upfront Costs

Lower Emmissions

Improved Efficiency & ESG

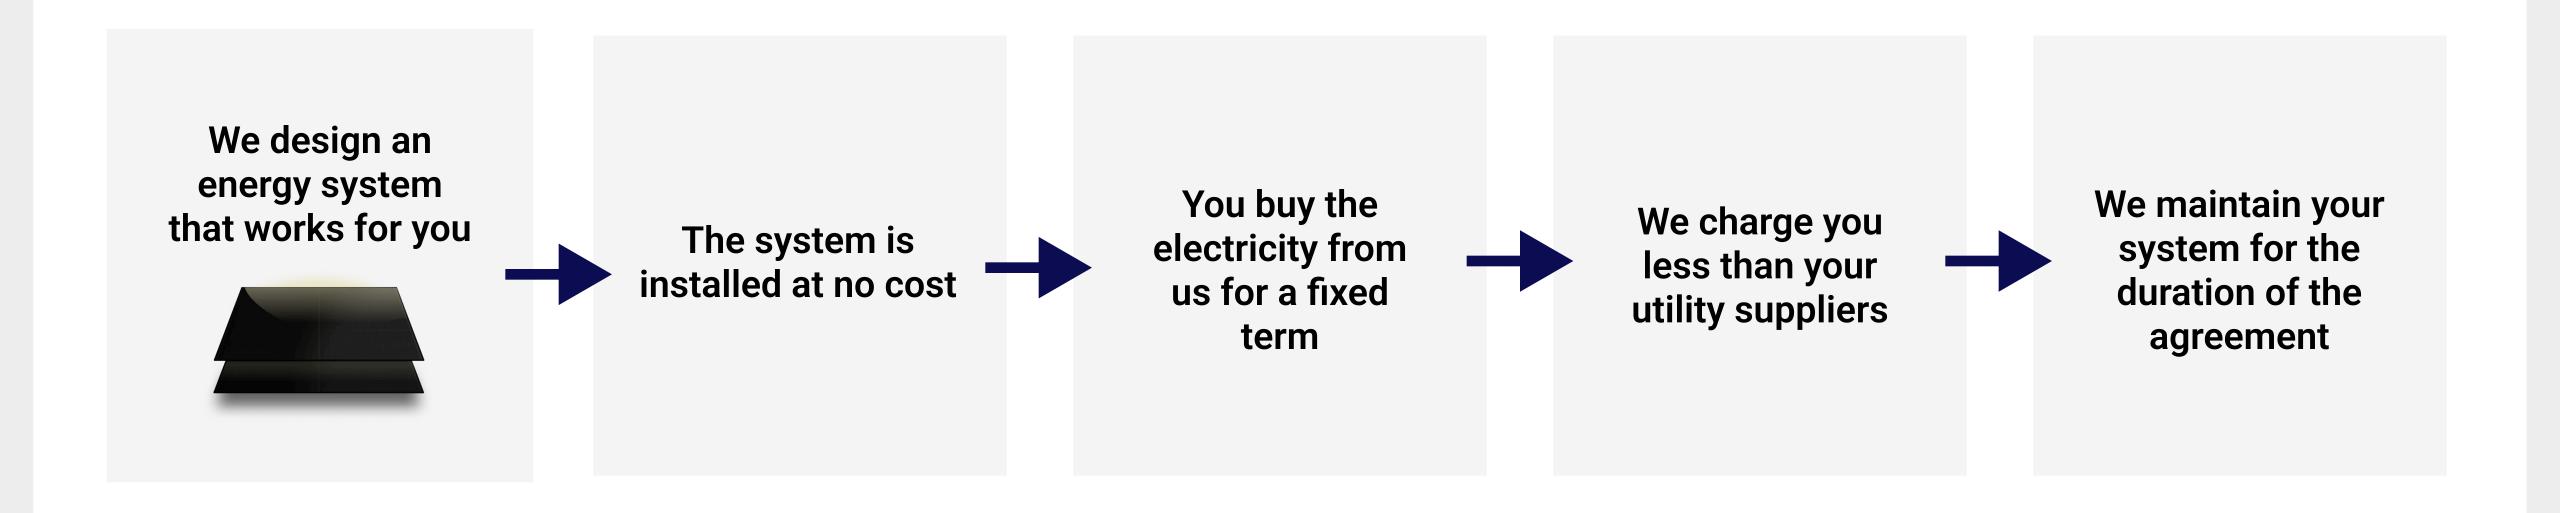

No Maintenance

Fully Funded & Managed

Improved Asset Value

Better Tennant Appeal & EPC

PPA Example

The Process

Discovery

We begin with a consultation to understand your site, usage, and goals. Then we design a tailored renewable energy system and agree commercial terms, including PPA pricing and duration.

Approvals

Our team manages all planning applications, DNO submissions, and technical checks to get your project fully approved and ready to go.

Implementation

We handle the full installation at no cost to you. Once live, your site starts benefiting from reliable, clean energy at a fixed, low rate.

FAQs

How do PPA prices compare to current electricity rates?

PPA rates are typically 20–40% lower than standard grid electricity — and unlike the grid, they're predictable for the full contract term. That means long-term protection from energy price spikes and better control over your operating costs.

Who owns and maintains the system?

The system is owned and operated by our partners for the duration of the PPA. They handle all installation, servicing, insurance, and maintenance.

What happens if I sell the building?

The PPA can usually be transferred to the new owner or tenant, subject to standard approval – similar to a lease. This is a common and straightforward process.

Will the installation affect my roof or operations?

No — installations are designed to be non-disruptive. We carry out full structural assessments and work to avoid downtime or access issues.

Do I need planning permission?

In many cases, rooftop solar does not require planning permission. Where it's needed, we manage the process on your behalf.

How long is the typical agreement?

Most PPAs run for 15 to 25 years, depending on the site and system size. This gives you long-term price certainty and maximum savings.

What types of buildings are suitable?

We work with commercial, agricultural, and industrial sites — from warehouses and factories to farms and business parks. If you have roof space, land, or high energy usage, we can help.
